

# Stim GAIN

FEED SUPPLEMENT

## GET MORE FROM YOUR FEED. GET MORE FROM YOUR HERD.

**StimGain** is an ethyl alcohol-based feed supplement designed to support the natural appetite and functions of livestock, with specific formulations catering to the needs of each species.

Dairy cows depend on rumen fermentation to receive nutrients and energy, which is why **StimGain** for Dairy takes the needs of the rumen microbes into account. Maintaining healthy microbes helps to preserve, and improve, rumen fermentation—which leads to greater health and production overall.

### KEY DAIRY BENEFITS:

- Improves intake of feed and forage
- Improves rumen fermentation
- Reduces feed costs and waste
- Improves transition periods
- Reduces nutrient loss through manure
- Compliments probiotics
- Promotes better herd health overall

### FEEDING STIMGAIN TO YOUR HERD

StimGain is easy to handle and can be added to your herd's feed in multiple ways.

- Add **StimGain** to grain mix
- Blend **StimGain** into total mixed rations (TMR)
- Use **StimGain** as a top dress
- Put **StimGain** in lick tanks

# StimGAIN

FOR DAIRY

## RESEARCH AND DEVELOPMENT

Each **StimGain** formula is developed by Feed Energy scientists and production teams with a focus on delivering high-quality products that customers and distributors trust.

## TESTED, TRIED AND TRUE

- Herds who consumed feed with **StimGain** saw the following results:
- 29% increase in dietary protein digestion
- 23% increase in microbial protein
- 39% increase in microbial efficiency
- 24% decrease in risk of acidosis
- 8% increase in microbial fiber digestibility

These results demonstrate the following **StimGain** benefits:

- Reduced need for by-pass protein in the ration
- Decreased ration cost
- Reduced need for supplemental protein
- Greater return on energy fed in the ration
- Less grain and protein required in the ration
- Increased butterfat levels

## RATION GUIDELINES

Dry Cows: 1 lb. per head each day

Pre-fresh Period: 2 lbs. per head each day

Lactating Cows: 2 lbs. per head each day\*

\*Additional Guidelines:

Adjust ration crude protein to the original status

Remove counterproductive ingredients, such as liquid vegetable fats, tallow, ionophores and by-pass fats.

In the first 14 days, monitor changes in MUNs, manure and DMI. Reduce ration crude protein while maintaining 2 lb. **StimGain** according to recommended guidelines.
